

Millikin University
Student Learning in the Chemistry Major

By Paris Barnes, George Bennett,
Tim Guasco, Kyle Knust, and Anne Rammelsberg
July 1, 2017

Executive Summary

The Department of Chemistry supports the mission of the university in preparing students for professional success, democratic citizenship in a global community, and a personal life of meaning and value by producing graduates who achieve the following three chemistry-specific learning outcome goals:

1. Demonstrate the skills to solve problems and communicate through writing and speaking.
2. Discover how to integrate and apply knowledge and skills both within the chemistry community and between chemistry and other disciplinary communities.
3. Develop the capacity to address real-world scenarios in which chemistry plays a role.

Our curriculum introduces each student to the five sub-fields of chemistry recommended by the Committee on Professional Training of the American Chemical Society. The Chemistry curriculum incorporates the integration of theory and practice. Theory is emphasized in classroom activities while practice is emphasized in the laboratory. In some cases, courses tightly integrate the two. Every chemistry major completes a core curriculum. Depending upon their individual interests, students then select additional study in one of four areas that we call emphases: research, secondary education, biochemistry, or business.

Regardless of emphasis, undergraduate research is the capstone of the chemistry major at Millikin. Students in the Department of Chemistry demonstrate performance learning in the three stages of an undergraduate research project: proposal, performance, and presentation. This activity requires the synthesis of all three learning outcome goals and therefore is the easiest to assess uniformly. Excellent undergraduate research characterizes excellent chemistry programs.

We created a rubric for assessing each component of undergraduate research: proposal, performance, and presentation (oral and written). Based on the rubrics we created for assessing the proposal, performance, and presentation of research, we rate our current status on all three learning goals as "green light" (at an acceptable level). We will continue to work on ways to ensure that all our students perform at the "green light" level in the future.

Report

Performance Learning

Millikin students thrive through our unique approach to performance learning. In addition to a solid foundation in the theory of a given field, Millikin students gain practical, hands-on experience in their fields of study. Students in the Department of Chemistry demonstrate performance learning in the three stages of an undergraduate research project. Our students learn how to plan and communicate their plan for research by writing a proposal. They learn to conduct research by performing research. They learn how to communicate their results through written and oral presentations. We want our students to learn how to do chemistry the way chemists do it, and we accomplish that by having our students **do** chemistry the way chemists do it.

The culmination of performance learning for students in the Department of Chemistry is presentation of their research to an external audience. Eight chemistry majors graduated this May. Two students presented their research at the Butler University Undergraduate Research Conference. One student presented her research at the Sigma Zeta National Science and Mathematics Honors Society Annual Conference. Seven students presented their research at the 2017 Millikin University Undergraduate Research Poster Symposium, and **four of them received awards for their posters, including three second place awards and a third place award.** In addition, one senior biology major/chemistry minor presented his chemistry research at the 2017 Sigma Zeta National Convention. **He earned a best overall poster award.**

The Department of Chemistry further supports the mission of the university in preparing students for professional success, democratic citizenship in a global community, and a personal life of meaning and value. The mission of the department is to produce graduates who achieve the following three learning outcome goals:

1. Demonstrate the skills to solve problems and communicate through writing and speaking.
2. Discover how to integrate and apply knowledge and skills both within the chemistry community and between chemistry and other disciplinary communities.
3. Develop the capacity to address real-world scenarios in which chemistry plays a role.

The successful graduate of the Department of Chemistry is not necessarily a professional chemist. For example, recent graduates are working in the chemical and pharmaceutical industry, practicing medicine or pharmacy, selling technical goods and services, running their own businesses, teaching, and working in the areas of government and law, among other things.

Snapshot

The Department of Chemistry is approved by the Committee on Professional Training (CPT) of the American Chemical Society (ACS). The department consists of five full-time faculty members representing the five major sub-fields of chemistry: analytical chemistry, biochemistry, inorganic chemistry, organic chemistry, and physical chemistry. All chemistry majors choose one of four emphases: biochemistry, business, research, or secondary education. Students complete 23 credits of common core courses plus additional courses specific to the emphasis. Our CH121 (General Chemistry) course serves approximately 200 students per year, including students majoring in chemistry, biology, nursing, elementary education, athletic training, physical education, psychology, and exploratory studies, *inter alia*. Our CH224 (Inorganic Chemistry) and CH301/302 (Organic Chemistry I and II) courses each serve approximately 50-65 students per year, primarily chemistry and biology majors. In the decade from 1994 to 2004, approximately nine majors per year graduated with chemistry degrees. Since 2004, the number of majors has occasionally exceeded that number, going as high as 18 in 2008, in part due to the 83,000-square-foot Leighty-Tabor Science Center, which opened in the spring 2002 semester. Approximately half of our graduates pursue advanced degrees.

Students can only thrive when they are mentored by an active and engaged faculty. Fortunately, that is the case in the Department of Chemistry. In the past year, one faculty member was awarded a research grant from the American Chemical Society Petroleum Research Fund. Another faculty member successfully obtained Project SEED funding from the American Chemical Society to enable economically disadvantaged local high school students to perform research at Millikin. Two faculty members attended the Sigma Zeta National Convention. Two faculty members attended a spectroscopy workshop put on by the instrument company Agilent. One faculty member attended Pittcon, a conference sponsored by the ACS Division of Analytical Chemistry, as well as the Butler University Undergraduate Research Conference, continuing a tradition of excellence in teaching and research that is a hallmark of the Department of Chemistry.

One full-time faculty member was on leave during the fall 2016 semester, and another full-time faculty member was on junior academic leave during the spring 2017 semester. As a result, the department hired nearly 3 FTE adjunct instructors over the year. Other faculty members will be eligible for sabbatical leaves within the next few years. Therefore, a short-term goal of the department is to recover one full-time position as soon as budget conditions permit and to add a sixth tenure-track position within five years. The department benefited from a change in status from part-time to full-time for the administrative assistant who supports the department and the pre-professional programs.

In terms of curriculum, the review we began in spring 2016 resulted in several changes that are at various stages of approval or implementation. Most

notably, we have opted to discontinue the Block General Chemistry course. In its stead, we have developed CH114 (Fundamentals of Chemistry), to be offered for the first time in fall 2017. The course will focus more on the chemistry and techniques associated with clinical situations and will feed directly into CH203/205 (Essentials of Organic and Biochemistry). Thus, we anticipate that nursing and athletic training majors will constitute the primary audience for the new course. Another curricular change we made was to require students with biochemistry and business emphases to take CH420/CH352 (Instrumental Analysis). Advanced instrumentation is playing a greater role in all areas of chemistry. Furthermore, senior exit interviews in previous years revealed that too many of our majors are graduating with the knowledge of how to operate the instruments but with little understanding of how the instruments actually work.

Recently, ACS-CPT modified the curricular requirements necessary for program approval. Namely, approved departments are expected to offer adequate coverage of several advanced interdisciplinary topics, such as polymers and nanomaterials, for all majors. CPT gives departments flexibility and latitude in determining how best to cover the topics. We currently cover most of the topics in existing courses, but we must increase the number of class hours devoted to them.

With respect to the summer research program in Taiwan in cooperation with Tunghai University, one of our long-term goals is to continue this relationship and increase the number of students participating in the program. Three students participated in the program in the summer of 2011, and 5 students participated in the summer of 2012. Five students participated in the summer of 2014.

Approval by the Committee on Professional Training of the American Chemical Society; excellent facilities; a dynamic curriculum that evolves to meet the needs of our students; students demonstrating performance learning; an active and engaged faculty. What does it add up to? According to information from the Career Center, a **comprehensive success rate of 100%** for chemistry graduates from 2004-2016.

The Learning Story

Three hallmarks characterize the typical learning experience provided through the chemistry major:

- 1. Do Chemistry as Chemists Do It**
Students use modern instruments from the first lab class in the first year; repeating experiments should be normal, not remedial. The desired outcome of an experiment is an accurate, reproducible, unambiguous result, not a predestined "right one."
- 2. Modern Chemistry is Integrated**

Chemists address problems with concepts and techniques that span the various sub-fields of chemistry. Moreover, biologists, nurses, psychologists, and physicians also regularly use these same concepts and techniques.

3. The Main Goal of Laboratory is Tackling a New Problem Capably

We design experiments to develop maximum independence, not maximum coverage.

The curriculum map is included as Appendix 1. Our core curriculum introduces each student to four of the sub-fields of chemistry while providing a foundation in essential laboratory techniques. The additional courses in each emphasis then offer students more specialized technical training. Regardless of emphasis, undergraduate research is the capstone of the chemistry major at Millikin. It has three components, including the proposal, the research, and final written and oral presentations.

The proposal is part of the course CH254, Introduction to Research. The proposal must be a project suggested by a faculty member or an industrial mentor (with consent of a faculty member). The proposal includes a background section that shows careful reading of primary journals. Ideally, the research should be connected to a real-world problem.

In terms of the actual research, we look for consistent work over time. The student should try to do a project that might be presented at a meeting, especially the National Meeting of the ACS. The lab notebook is assessed to determine the quality and quantity of work. The best projects create new knowledge.

In CH482 (Senior Seminar), the student writes the final report and presents the work orally. This presentation includes an explanation of the context of the work, the techniques used, the data, and what the results mean. The student is also expected to reflect on what he or she learned about chemistry in the process.

Just as the curriculum helps the department achieve goals for student learning outcomes and helps students actualize their plans of study, so too does the advising process. Advising in the Department of Chemistry facilitates and integrates reasoned choices that promote the student's growth as a person and as a major. In order to realize this mission, we try to help students:

1. Develop plans of study for successfully achieving their degree and career goals,
2. Select courses each semester to progress toward fulfilling their plans of study,
3. Use the resources and services on campus to assist in fulfilling their plans of study, and

4. Graduate in a timely manner.

At least once a semester, the student meets in person with the academic advisor to discuss fulfillment of the plan of study.

Assessment Methods

We decided that assessment of the three stages of undergraduate research is the most informative way to assess the three learning outcome goals. The research project is the culminating event of each goal as well as the climax of each emphasis within the major. We have created rubrics for assessing the proposal, performance, and presentation of research. These rubrics are attached as Appendix 2.

Assessment Data

Department goal 1 will be assessed in CH482 using the Final Presentation rubric. Department goal 2 will be assessed in CH254 using the Proposal rubric. Department goal 3 will be assessed in CH391/491 using the Research rubric.

As noted above, each department learning goal will be assessed by evaluating student learning in one class. Five to 10 students from each class will be randomly selected for evaluation. As a general rule, one-half of a given class will be selected; for classes with fewer than 5 students, all students in the class will be evaluated; for classes with greater than 20 students, 10 will be randomly selected.

The grading rubrics used to assess each learning goal have three categories: Excellent, Adequate, and Nominal. The range of points possible on each rubric is 2-14. A student ranked adequate on all evaluative items would have a numeric score of 8. All students should be ranked adequate (i.e., have a minimum score of 8 on each rubric) if the department goals are being achieved. Realistically, however, there may be students, for a variety of reasons, who are ranked less than adequate. Considering the small sample sizes typically available in a given class, the following assessment criteria will therefore be used to evaluate student progress in achieving department learning goals:

Green light (an acceptable level or clearly heading in the right direction and not requiring any immediate change in course of action): 80% or more of the students ranked adequate or excellent;

Yellow light (not an acceptable level; either improving, but not as quickly as desired or declining slightly. Strategies and approaches should be reviewed and appropriate adjustments taken to reach an acceptable level or desired rate of improvement): 60% to 79.9% of the students ranked adequate or excellent; and

Red light (our current status or direction of change is unacceptable. Immediate, high priority actions should be taken to address this area): fewer than 60% of the students ranked adequate or excellent.

For reporting purposes, a rubric numeric score of 13-14 will be considered excellent; a score of 8-12 will be considered adequate; and a score less than 8 will be considered nominal.

Assessment data are listed in the tables below.

Table 1.

Department Goal 1: Demonstrate the skills to solve problems and communicate through writing and speaking.

Rubric Category	Percentage of students in category
Excellent	50
Adequate	50
Total of above (used for rating)	100
Nominal	0
Number of students evaluated	4
Average numeric score	12.8

Rating for goal 1: **Green light**

Table 2.

Department Goal 2. Discover how to integrate and apply knowledge and skills both within the chemistry community and between chemistry and other disciplinary communities.

Rubric Category	Percentage of students in category
Excellent	40
Adequate	60
Total of above (used for rating)	100
Nominal	0
Number of students evaluated	5
Average numeric score	11.4

Rating for goal 2: **Green light**

Table 3.

Department Goal 3. Develop the capacity to address real-world scenarios in which chemistry plays a role.

Rubric Category	Percentage of students in category
Excellent	0
Adequate	100
Total of above (used for rating)	100
Nominal	0
Number of students evaluated	4
Average numeric score	10.0

Rating for goal 3: **Green light**

Table 4.

Year-by-Year Comparisons.

Year →		2013	2014	2015	2016	2017
Goal ↓						
1	Rating percentage	100	75	100	80	100
	“Color” rating	Green	Yellow	Green	Green	Green
2	Rating percentage	100	100	100	100	100
	“Color” rating	Green	Green	Green	Green	Green
3	Rating percentage	62.5	80	100	100	100
	“Color” rating	Yellow	Green	Green	Green	Green

Ratings: ≥80% = Green; ≥60% - <80% = Yellow; <60% = Red

Analysis of Assessment Results

For the 2016-2017 academic year, student learning for all three of our learning goals was assessed at the green light level (an acceptable level or clearly heading in the right direction and not requiring any immediate change in course of action). This is the eleventh consecutive year in which student learning for goal #2 has been at the “green light” level. This is the tenth time in eleven years in which student learning for goals #1 and #3 has been at the “green light” level. Although we are pleased with these results, we view them as still having room for improvement. As we have done in every year since we began the assessment process, we have made (and continue to make) conscious efforts to improve student learning.

Although our seniors demonstrated stronger writing skills than recent classes, we continue to observe that the quality of student writing remains unsatisfactory across the board. We recognize that despite the positive assessment of student learning, this is one area where we must and will continue to work with students to strengthen their skills.

While we are pleased that the majority of our students achieved an acceptable level of learning on all three of our learning goals, we know that we cannot rest on our laurels. We continually evaluate our curriculum, keeping two areas foremost in our evaluation: 1. Are we delivering a quality education to our students? and 2. How well do our students learn?

Quality

We are confident in the quality of our program. Our program is accredited by the Committee on Professional Training of the American Chemical Society—the benchmark of a quality chemistry program. Our graduates leave Millikin and go on to successful and distinguished professional careers. Furthermore, the last university self-study ranked the Department of Chemistry as a “high quality” program, one of the few departments in the university to be so designated. We therefore know our students gain a quality education that prepares them for professional success and that our program is a high quality program.

We conduct exit interviews with each of our graduating seniors. We ask students to be prepared to discuss the following seven questions (students are given the questions in advance):

- 1.) What will you be doing one year from now?
- 2.) What will you most remember about your experience as a chemistry major five years from now?
- 3.) What, if anything, would you do differently if you had to complete your degree all over again?
- 4.) How would you advise a new chemistry student?
- 5.) What are the strengths of the chemistry program?

- 6.) What aspects of the chemistry program need improvement?
- 7.) Did you feel as though you “belonged” in the department? Why or why not?

Students are open and honest in their responses to these questions. The overall message we receive from students is “keep doing what you have been doing.” Even so, students often offer specific suggestions for improvements in the department, which we take to heart. Recently, students have expressed concerns about the age of the instrumentation in the department, so we are looking for opportunities to both acquire new instruments and retire instruments that we no longer use. Refurbished equipment has proven to be a worthwhile pursuit. Dr. Knust thoroughly cleaned the instrument lab prior to the fall 2016 semester and traded the items we did not want to keep to a company in exchange for credits that we were able to put toward the purchase of a refurbished gas chromatograph. Also, ADM donated refurbished thermal analysis equipment to our department in spring 2017. We hope this donation sets a precedent that ADM and other local companies continue to follow.

A modern and up-to-date curriculum must be supported by modern and up-to-date instrumentation. In the Modernization Report requested by Dean Randy Brooks in 2013, we documented the pressing need to update our instrumentation holdings. An article in the Council on Undergraduate Research CUR Quarterly (“Guidance for Entering Academics in Organic Chemistry”, McLaughlin, E. C. et al., Summer 2013, pp. 41-48) lends further credence to the important role infrastructure and internal support play in the quality of a chemistry program. Two selected quotes from the article:

“It is not uncommon for certain chemistry programs to have over \$500,000 invested in instrumentation...Accordingly, the dollar support earmarked for equipment maintenance by the institution sends a clear message to both entering students and faculty.”

“If the institution expects the potential faculty member to be visible in research, that institution will supply support to assist in the establishment of a research program. At predominantly undergraduate institutions, these amounts vary (and typically range from \$25,000 to \$50,000)...”

While we greatly appreciate the support of the university in recent years to enable us to acquire new instruments, we want the university to understand that ongoing maintenance and upkeep is a significant investment, too. In order for the Department to continue to deliver on the promise of education and deliver a high quality program to our students, the level of annual support from the university must dramatically increase.

Learning

In addition to the learning goals and assessment measures described in this report, we also use additional measures to assess student learning in the chemistry program. We continually monitor and evaluate these measures of student learning. We monitor the quality of our students' writing on formal laboratory reports, research proposals, and research reports. We see a downward trend in the quality of writing—a situation admittedly not unique to chemistry, but disturbing nonetheless. We encourage students to take advantage of the resources available at Millikin's Writing Center, and mentor students one-on-one. We administer standardized exams such as those developed by the American Chemical Society's Examinations Institute and the Educational Testing Service Major Field Test in Chemistry. We find that our students typically score below the 50th percentile on such standardized exams. We view the standardized exams as a measure of our students' long-term learning, and are concerned with the relatively poor performance of our students on these exams. We will devote more effort in the future to improving our students' long-term learning while still maintaining their excellent showing on our learning goals.

Improvement Plans

As noted above, one area we intend to work on is improving students' long-term learning. Standardized exams with nationally normed data are our primary tool for the summative assessment of long-term learning. For example, we administer the respective ACS examination at the ends of CH224 (General Inorganic Chemistry), CH232 (Analytical Chemistry), CH302 (Organic Chemistry II), CH303 (Physical Chemistry I), CH331 (Biochemistry), and CH406 (Advanced Inorganic Chemistry).

We administer the ETS Major Field Test in Chemistry in CH482 (Senior Seminar). In the past, we administered the test at the end of the course. Students merely had to take the exam—there was no incentive for students to do well on the exam, nor was there a penalty for doing poorly on the exam. Beginning in 2008, we administered the test near the beginning of the course. We also instituted a minimum score students were required to achieve in order to satisfactorily complete the test. If students did not pass the test on their first attempt, they were required to work with a faculty member on remedial proficiencies before taking the exam a second time. If students did not pass the exam on their second attempt, the cycle repeated, and students were allowed to take the exam a third and final time.

The ETS exam is scored on a scale of 120-200. We set 140 as the passing level. Student results were as follows:

Table 5.

Passing Scores vs. Number of Attempts on the ETS Major Field Test in Chemistry

Year →	2012	2013	2014	2015	2016	2017
Attempts ↓						
Percent passing on 1 st attempt	67	73	63	40	71	63
Percent passing on 2 nd attempt	17	18	0	20	29	25
Percent passing on 3 rd attempt	0	0	25	10	NA	0
Percent not passing	16	0	13	30	0	13

As can be seen from Table 5, seven of eight students passed the ETS exam this year, and a majority of five passed on the first attempt. Along with student success on the ETS exam, we have also noticed a slight improvement in overall scores on the standardized American Chemical Society exams, most notably in Physical Chemistry with Dr. Guasco and General Inorganic Chemistry with Dr. Barnes. While we do not “teach to the test,” we have devoted more energy across the curriculum to better prepare our students for these exams. While we realize we may not achieve 100% passing every year, we will nevertheless continue to work with our students to help ensure a high pass rate.

In sum, our students are learning well. We must continue to do the things that have been successful for our students. We will therefore continue to do the same things we have done in the past with the “tweaks” identified above. We will, of course, continue to collect data in the coming years to be better able to identify trends that may need to be addressed in more depth. Finally, infrastructure support from the university must increase if we are to continue to deliver a quality education to our students.

Appendix 1: Curriculum Map for Chemistry

University Goals

1. Professional success
2. Democratic citizenship in a global environment
3. A personal life of meaning and value

Department Goals

1. Demonstrate the skills to solve problems and communicate through writing and speaking.
2. Discover how to integrate and apply knowledge and skills both within the chemistry community and between chemistry and other disciplinary communities.
3. Develop the capacity to address real-world scenarios in which chemistry plays a role.

Curriculum Map (Lecture/Lab) (**Bold** = Chemistry core courses)

Year	Dept. Goal 1	Dept. Goal 2	Dept. Goal 3
1	CH121 or CH131/151 CH224/CH152		
2	CH232/CH253 CH301/251 CH302/CH252		
3	CH303/CH351 CH304 CH432	CH254 CH331/CH354	CH391-392
4	CH353 CH406 CH420/CH352 CH482	CH482	CH470 CH491-492

Appendix 2: Evaluation Rubrics for Undergraduate Research

The proposal: grading done by faculty member teaching Introduction to Research

	Excellent	Adequate	Nominal
Process	[5 points] A thorough explanation of previous work to a clear study question followed by analysis of previous work to synthesis into a coherent proposal.	[3 points] Shows some evidence of the process: explanation to conjecture to analysis to synthesis but incomplete.	[1 point] Restates some general ideas or issues but shows no evidence of analysis.
Connection	[3 points] A good proposal has a history. This includes your personal experience, it has a real-world context, and it has a connection to previous work both at Millikin and in the literature.	[2 points] Shows you understand the history of the proposal by examining some of your own experiences in the past as they relate to the proposal but otherwise incomplete.	[1 point] Minimal connections made.
Readings	[4 points] In-depth synthesis of thoughtfully selected aspects of readings related to the proposal. The readings are significant and appropriate at the college level. While you may use data and primary texts collected from the internet, the majority of readings are from library sources. Makes <i>clear</i> connection between what is learned from readings and the proposal.	2 points] Goes into more detail explaining some specific ideas or issues from readings related to the topic. Makes general connections between what is learned from readings and the topic.	[1 point] You show some evidence of reading about the topic and are able to state some general ideas or issues from readings related to the topic. But there is no evidence of library research beyond the class textbook, secondary sources and the internet.
Grammar	[2 points] No spelling or grammar errors.	[1 point] Few spelling and grammar errors.	[0 points] Many spelling and grammar errors, use of incomplete sentences, inadequate proof reading.

Research: evaluation by faculty mentor using notebook

	Excellent	Adequate	Nominal
Quantity	[5 points] You work consistently over the entire research period with clear evidence of significant weekly work. You consistently report to faculty mentor.	[3 points] You work consistently most of the time but miss from time to time	[1 point] You try to cram the work into a short period
Quality	[3 points] You work efficiently with some measure of success. Your work is worthy of submission to an off-campus conference	[2 points] You have some success but not at the level worthy of an off-campus conference	[1 point] Work is not worth crowing about.
Notebook	[4 points] Notebook is clearly written and contemporaneous.	2 points] Notebook is contemporaneous but hard to follow.	[1 point] Your notebook is incomplete and a mess.
Safety	[2 points] You consistently use safe practice and clean up your work area.	[1 point] You consistently use safe practice but leave a mess behind.	[0 points] You work in an unsafe manner.

Final Presentation: written and oral report of results

	Excellent	Adequate	Nominal
Report	[5 points] A report having quality that might be submitted to a research journal. Includes background, data and methods, results, and discussion. Includes suggestion for further work.	[3 points] A good report but missing some aspect of an excellent report	[1 point] A report having minimal value
Oral Presentation	[5 points] Clear, confident presentation. Audience questions are answered in a way to illustrate a complete knowledge of the topic.	[3 points] A good presentation but lacking clarity or confidence.	[1 point] An awkward, weak presentation but a presentation made nevertheless.
Reflection	[2 points] A valuable reflection on the complete undergraduate chemistry experience.	[1 point] Some attempt at reflection but incomplete	[0 points] No reflection
External presentation	[2 points] Presented results at an off-campus conference or meeting	[1 point] Presented a good poster at the Millikin undergraduate research symposium	[0 points] No presentation
